| P4 — debt or outside the standard    | 1                                                     |  |  |

**What this document is.** Evidence gathered by automated testing, expressed against the clauses of the harmonised standard. It supports a conformance claim. It is not the claim, it is not a certificate, and it is not legal advice.

**What it cannot be.** Automated testing detects roughly 30 to 40 percent of WCAG failures. A clean automated result is a starting point, not a conformance claim.

**This run executed rules beyond V3.2.1 (2021-03).** The tags wcag22a, wcag22aa cover criteria the harmonised standard does not yet adopt. Findings from them are marked below as not currently required and are excluded from the harmonised count, so the version above states what conformance is claimed against — not everything that ran.

## What changes when V4.1.1 is cited

Scheduled for citation in the Official Journal on 30 November 2026 per the ETSI work programme. The obligation begins on citation, not on publication, and the date can move.

|                                       |     |
|---------------------------------------|-----|
| WCAG adopted today (V3.2.1 (2021-03)) | 2.1 |
| WCAG adopted from citation (V4.1.1)   | 2.2 |

|                             |   |
|-----------------------------|---|
| Clauses failing today       | 4 |
| Clauses failing at citation | 5 |

### Failures that become obligations.

- Clause 9.2.5.8 — Target Size (Minimum) (WCAG 2.5.8, level AA), 16 elements

**What this scan will not tell you about the transition.** WCAG 2.2 adds 6 criteria at levels A and AA. This scan has a check for 1 of them. The other 5 require a person, and are absent from the findings below because they were never assessed — not because they pass.

- **2.4.11 Focus Not Obscured (Minimum)** (AA) — *requires a person*. Requires knowing whether a sticky header or cookie bar covers the focused control at the moment it receives focus.
- **2.5.7 Dragging Movements** (AA) — *requires a person*. Requires finding every drag interaction and confirming a single-pointer alternative exists.
- **2.5.8 Target Size (Minimum)** (AA) — checked by this scan. axe-core measures rendered target geometry directly.
- **3.2.6 Consistent Help** (A) — *requires a person*. Requires comparing where help appears across several pages, and judging whether it is the same help.
- **3.3.7 Redundant Entry** (A) — *requires a person*. Requires walking a multi-step form and noticing information asked for twice.
- **3.3.8 Accessible Authentication (Minimum)** (AA) — *requires a person*. Requires judging whether a login imposes a cognitive function test with no alternative.

### How to read the priority bands

- **P1** — Blocks a user from completing a task and falls under the harmonised standard. Fix before anything else.
- **P2** — A clear failure of a required clause. Schedule it into the current cycle.
- **P3** — A required clause, narrower in reach or lower in impact.
- **P4** — Accessibility debt or a criterion outside the currently harmonised standard. Worth fixing, not urgent.

## Findings

---

### P1 Clause 9.4.1.2 — Name, Role, Value

WCAG 4.1.2, level A · 6 elements across 2 pages · worst impact critical

#### Required ARIA attributes must be provided

axe rule aria-required-attr

**span[role="checkbox"]** on <https://curbcut.org/demo/broken.html>

```
<span role="checkbox" tabindex="0">Gift wrap</span>
```

#### Buttons must have discernible text

axe rule button-name

**.iconbtn** on <https://curbcut.org/demo/broken.html>

```
<button class="iconbtn" aria-hidden="false"><span aria-hidden="true">≡</span></button>
```

#### Frames must have an accessible name

axe rule frame-title

**iframe** on <https://curbcut.org/demo/broken.html>

```
<iframe src="/demo/frame.html"></iframe>
```

#### Links must have discernible text

axe rule link-name

**.icons > a[href\$="broken.html"]** on <https://curbcut.org/demo/broken.html>

```
<a href="/demo/broken.html"></a>
```

#### Form elements must have labels

axe rule label

**input[type="email"]** on <https://curbcut.org/demo/contact.html>

```
<input type="email" name="email" class="req">
```

#### Select element must have an accessible name

axe rule select-name

**select** on <https://curbcut.org/demo/contact.html>

```
<select name="topic"> <option>An order</option> <option>A delivery</option> <option>Something  
else</option> </select>
```

## P1 Clause 9.1.1.1 — Non-text Content

WCAG 1.1.1, level A · 3 elements across 2 pages · worst impact critical

### Images must have alternative text

axe rule image-alt

**img** on <https://curbcut.org/demo/broken.html>

```

```

**.card:nth-child(1) > img** on <https://curbcut.org/demo/products.html>

```

```

**.card:nth-child(3) > img** on <https://curbcut.org/demo/products.html>

```

```

## P3 Clause 9.1.4.3 — Contrast (Minimum)

WCAG 1.4.3, level AA · 14 elements across 3 pages · worst impact serious

### Elements must meet minimum color contrast ratio thresholds

axe rule color-contrast

**.wrap > p** on <https://curbcut.org/demo/broken.html>

```
<p class="muted">Free delivery on orders over €40. Estimated arrival in two to four working days.</p>
```

**.row:nth-child(1) > div:nth-child(2) > .muted** on <https://curbcut.org/demo/broken.html>

```
<div class="muted">Ground for filter</div>
```

**.row:nth-child(2) > div:nth-child(2) > .muted** on <https://curbcut.org/demo/broken.html>

```
<div class="muted">350&nbsp;ml, dishwasher safe</div>
```

### P3 Clause 9.2.4.4 — Link Purpose (In Context)

WCAG 2.4.4, level A · 1 element across 1 page · worst impact serious

#### Links must have discernible text

axe rule link-name

.icons > a[href\$="broken.html"] on https://curbcut.org/demo/broken.html

```
<a href="/demo/broken.html"></a>
```

### P4 Clause 9.2.5.8 — Target Size (Minimum)

WCAG 2.5.8, level AA · 16 elements across 3 pages · worst impact serious

**Not a current EAA obligation.** Reported so the gap is visible, not because the harmonised standard requires it today.

Introduced in WCAG 2.2. Not part of the harmonised EN 301 549 V3.2.1 (2021-03), which adopts WCAG 2.1. Treat as good practice and future-proofing, not as a current EAA obligation.

Expected to become required when EN 301 549 V4.1.1 is cited, scheduled for 2026-11-30. Fixing it now is early, not wasted.

#### All touch targets must be 24px large, or leave sufficient space

axe rule target-size

```

## What this scan did not check

These clauses cannot be evaluated by any automated tool. Their absence from the findings above means they were never assessed — not that they pass. Closing them requires a person, and for several of them a person using assistive technology.

- **9.2.4.5** — More than one way to locate a page. Requires judging whether site search, a sitemap or navigation genuinely offer alternative routes.
- **9.3.2.3** — Consistent navigation. Requires comparing repeated components across several pages.

- **9.3.2.4** — Consistent identification. Requires judging whether the same function is named the same way throughout.
- **9.3.3.4** — Error prevention on legal, financial and data entry. Requires walking a real checkout or submission flow to confirm it is reversible, checked or confirmed.
- **9.1.2.x** — Time-based media alternatives. Captions, transcripts and audio description have to be watched and read to confirm they are accurate, not merely present.
- **9.2.1.1** — Keyboard operability of the full journey. Automation reaches individual controls; only a manual pass proves an entire task can be completed by keyboard alone.
- **12.1.2** — Accessible product documentation. The documentation itself must meet the standard, and it usually lives outside the scanned pages.
- **12.2.2** — Accessible support services. Support channels must accommodate users with disabilities. Nothing on the page reveals this.

## Pages covered
